

ALM Quality Center Client Launcher Portable

SaaS CSE

|

What is the ALM Client Launcher?

ALM Client Launcher is a lightweight, portable, and flexible tool that enables you to run an ALM client on any Windows machine with no need for Internet Explorer or admin permissions

Download ALM Client Launcher

<https://marketplace.microfocus.com/appdelivery/content/alm-client-launcher>

Download ALM Client Launcher

☒ From Marketplace
☐ From ALM Server

First save the download file (by using the “save” or “save as” option) and then run it.

Run ALM Client Launcher

Make sure you have run ALMClientLauncher.exe. It's only required for the first time you click me.

Continue with IE

Open ALM Client with Internet Explorer.

Version 15.00.0 - 15.01.0 - 15.50 - 15.51

RELEASE NOTES

This content package contains the ALM Client Launcher. What's new in version 3.1

- **I include ALMClientLauncher.exe file (for version 3.0) in the ALM 15.5.1 release bundle:** In the ALM qcbin page, you can directly download ALM Client Launcher 3.0 from ALM server without the need for the site admin to first upload the exe file to the server. [See the ALM 15.5.1 online help.](#)
- **Add launcher.config path to the registry table:** Run the ALMClientLauncher.exe --configpath command, and the launcher.config file path will be added in the registry table.
- **Run ALM Client Launcher in an unattended mode:** Run the ALMClientLauncher.exe --unattended command to run ALM Client Launcher in an unattended mode. For each yes/no question, ALM Client Launcher will select yes without user interaction until an error occurs.
- **Force-download client files from the server before launch:** Run the ALMClientLauncher.exe --forcedownload command to download client files from the server before launch, regardless of whether you already downloaded client files or whether the downloaded version is different than the server version.
- **Show message when errors occurred during file extraction:** When an error occurred during file extraction, a message is shown. Clicking the message, you will see the error details.
- **Support CAC authentication:** ALM Client Launcher supports Common Access Card (CAC) authentication.

FILES

[ALM_Client_Launcher_Guide_3.1.pdf](#) (201.4 KB)
[ALM Client Launcher 3.1.exe](#) (2.0 MB)

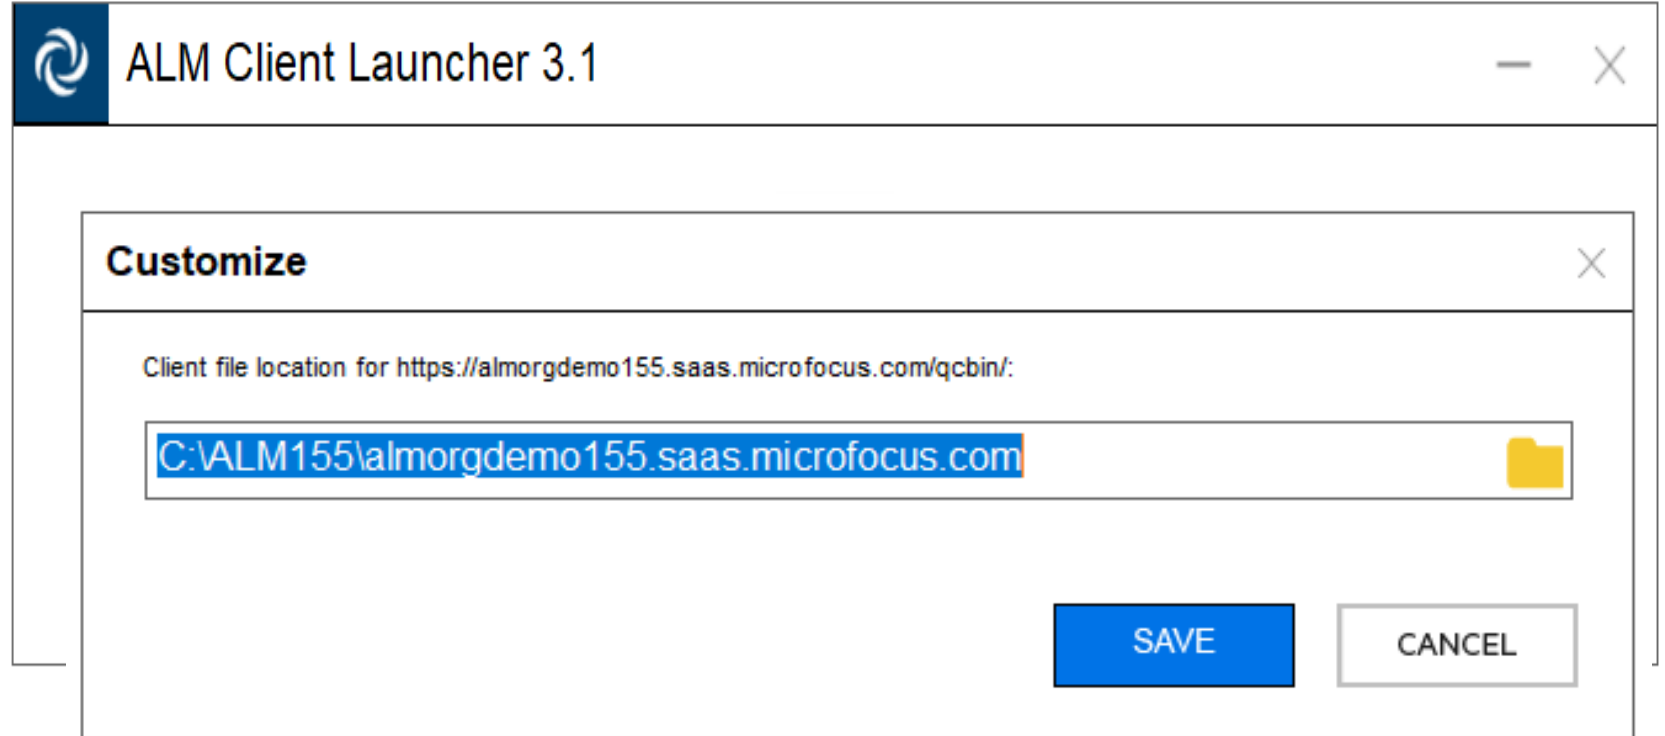

Provide ALM QC URL

- Execute the ALM Client Launcher executable
- Provide the ALM Client URL

Specified Installation Path

Specify a location where you have full permission

ALM Client Launcher 3.1

Customize

Client file location for <https://almorgdemo155.saas.microfocus.com/qcbin/>:

C:\ALM155\almorgdemo155.saas.microfocus.com

SAVE CANCEL

Download and Extract Client Files to Specified path

Download the zipped client files and extract to specified location

Manually downloading and extract client files

1. Download zip from you to your ALM instance

<https://<ALMURL>/qcbn/Apps/ClientPackages/ALMClient.zip>

2. Extract zip file to the installation directory

Example: C:\ALM155\almorgdemo155.saas.microfocus.com

3. In ALM Client Launcher, customize the installation path to point to Step 2.

Save ALM URL as a favorite

Click on Add Favorite to save your settings

ALM Client L

Edit Favorites

Name:

Demo 15.5

URL:

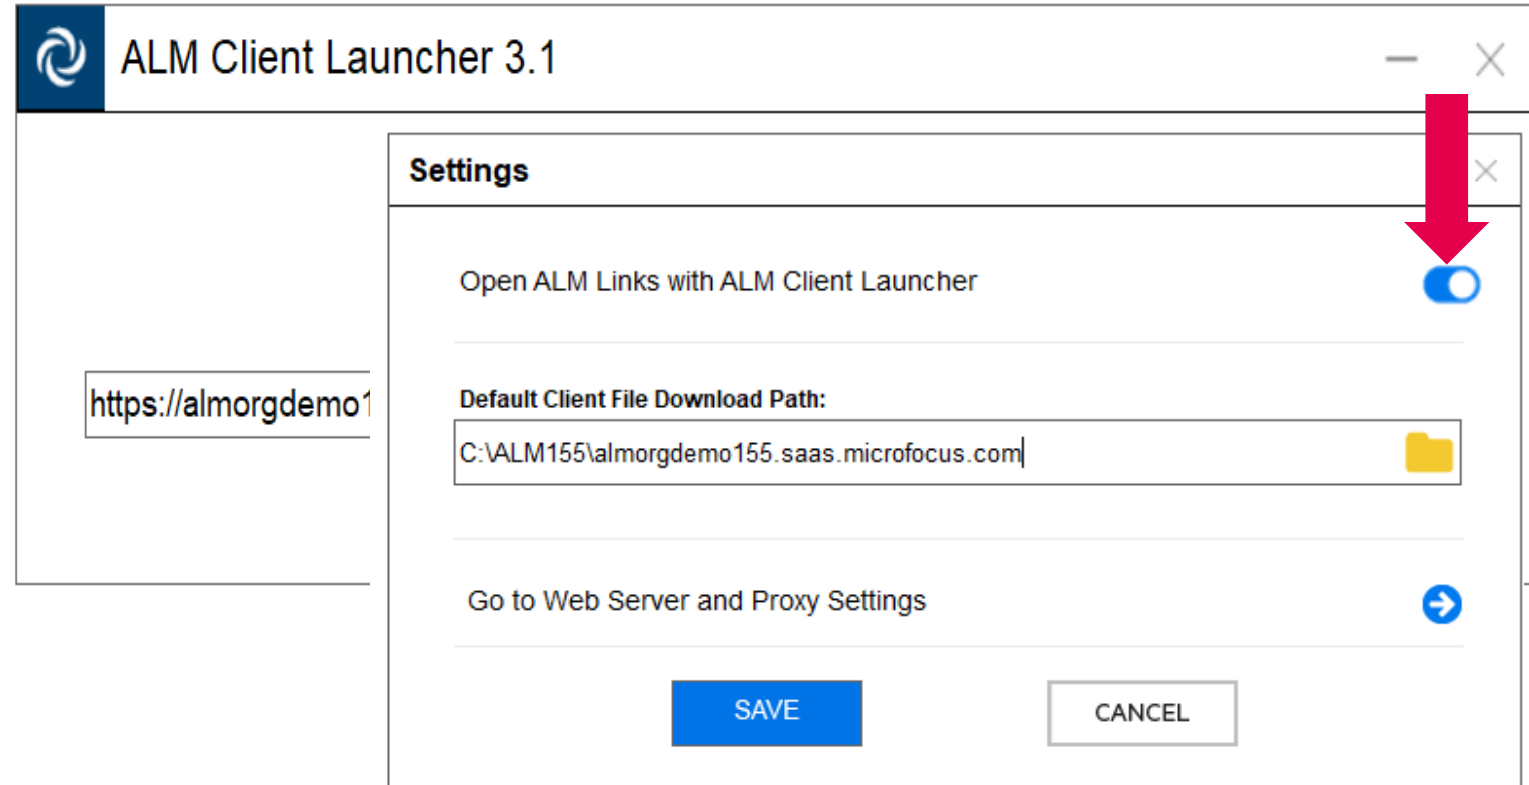

https://almorgdemo155.saas.microfocus.com/qcbin

REMOVE

DONE

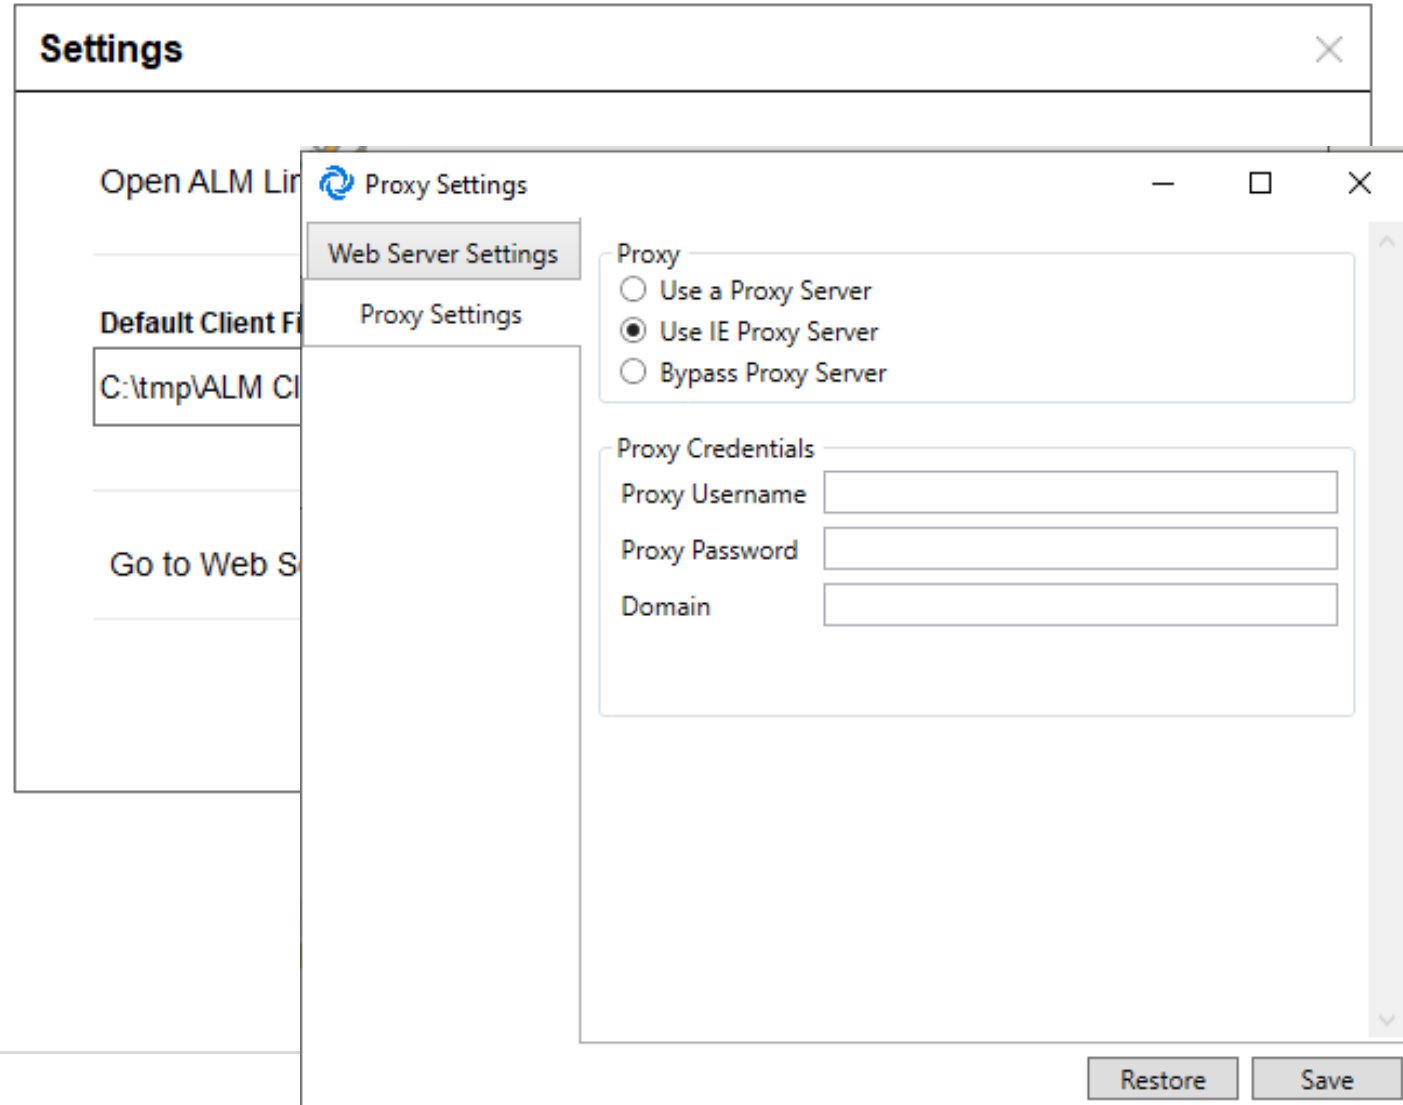

Settings: Allow ALM links to be open with ALM Launcher

Links in documents and other locations can invoke the ALM Client Launcher

Settings: Configure Proxy

- Click on Proxy Settings button to edit proxy information
- Select “Use IE Proxy Server” setting only if proxy does not require user credentials

ALM Configuration file

Configuration file is saved under user profile by default:

Example:

C:\Users\<username>\AppData\Local\Launcher.config

Command Lines

Use help command to list
command line options:

ALMClientLauncher.exe /?

```
ALM Client Launcher 3.1 Help.

ALMClientLauncher [option1] [option2] ...
Option format: {-|/}option name[=|:]{option value}, e.g. -url=value or -url:value or /url=value or /url:value

Option List:

-url=URL                               Connects you to ALM, if client files exist in your machine.
-clientpath or -cp=ALM Client folder   Specifies client files download path.
-download or -d                         Download client files
-reg or -r                             Registers ALM Client components on the current folder
-unreg or -u                           Unregisters ALM Client components on the current folder
-tdon                                  Enables opening ALM links with client launcher
-tdoff                                 Disables opening ALM links with client launcher
-addurl or -add                         Adds the ALM Server URL (with -url) and/or the ALM Client path (with -cp)
                                       to the launcher configuration.
-configpath=path                       Specifies the path for Launcher.config. This option should work with either -showui or -url
-noconfig                              Stops using Launcher.config. This option should work with either -showui or -url
-showui                                Shows Launcher UI
-labmanagement or -lab                 Connects to Lab Management projects.
-unattended                            Runs ALM Client Launcher in an unattended mode.
                                       For each yes/no question, ALM Client launcher will select yes without user interaction.
-forcedownload                         Always download ALM Client files before launch.
-help or -h or /?                     Shows help message
                                       Command line options will overwrite corresponding options
                                       in Launcher.config

Use examples

example1: ALMClientLauncher -url=http://almserver:8080/qcbin
Launches ALM Client in the current folder and connects you to http://almserver:8080/qcbin

example2: ALMClientLauncher -url=http://almserver:8080/qcbin -cp=client path
Launches ALM Client in the client path folder and connects you to http://almserver:8080/qcbin

example3: ALMClientLauncher -url=http://almserver:8080/qcbin/siteadmin
Launches Site Administration of http://almserver:8080/qcbin

example4: ALMClientLauncher -url=http://almserver:8080/qcbin/lab
Launches Lab Management of http://almserver:8080/qcbin

example5: ALMClientLauncher -d -url=http://almserver:8080/qcbin [-cp=client path]
Downloads the client files to the default path defined in the launcher configuration or to the path specified in the -cp option.

example6: ALMClientLauncher -reg [-cp=client path]
Registers ALM Client components for the current executing folder or for the path specified in the -cp option.

example7: ALMClientLauncher -tdon
Enables opening ALM links with Client Launcher.

example8: ALMClientLauncher -configpath=path -showui or -url={url}
Specifies the path of the Launcher.config and shows UI (-showui) or connects to ALM (-url).

example9: ALMClientLauncher -noconfig -showui or -url={url}
No configuration file will be used by the launcher and shows UI (-showui) or connects to ALM (-url).

*****
```

Use Command Line to install in unattended mode

```
>ALMClientLauncher.exe -url=https://almorgdemo155.saas.microfocus.com/qcbin  
-configpath="c:\ALM155\almorgdemo155.saas.microfocus.com" -unattended
```

The command will do the following:

1. Bring up ALM Client Launcher and set to unattended (no user interaction) mode
2. Set client path to C:\ALM155\almorgdemo155.saas.microfocus.com
3. Download the ALMClient.zip file
4. Extract zipped file to c:\ALM155\almorgdemo155.saas.microfocus.com
5. Set Launcher.config file location to
C:\ALM155\almorgdemo155.saas.microfocus.com

OTA Registration for 3rd parties Integration tools

```
>almclientlauncher.exe -reg -cp="c:\ALM155\  
almorgdemo155.saas.microfocus.com"
```

- Administration permission is NOT required
- OTA will be registered under HKEY_CURRENT_USER in the registry
- If you have OTA incompatibility issue due to previous installation, then run the ALM Client Cleanup tool to remove old version and re-register

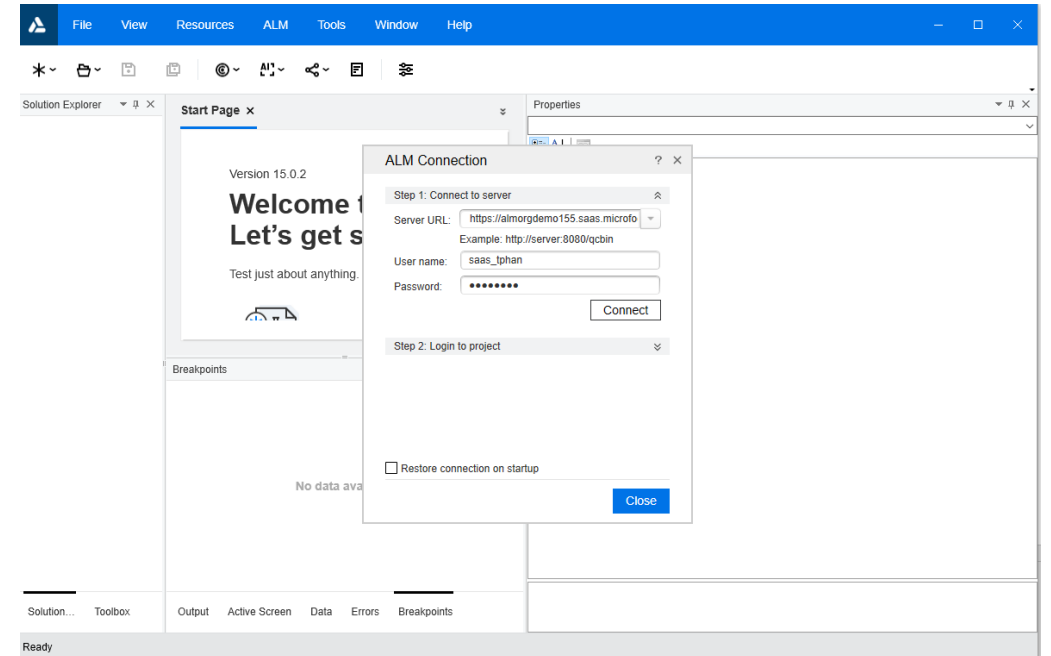

Micro Focus Integration Tools OTA Requirements

Tools	Needs ALM Client Launcher OTA Registration
Business View Add-in	No (REST)
Excel Macro	No (REST)
MF Connect	No (REST)
Sprinter	No (REST)
UFT*	No
Word Macro	Yes
3rd Parties OTA tools	Yes

*UFT will automatically download ALM Client files and register OTA overwriting Launcher's registration.

UFT Integration

- UFT will automatically detect and download the ALM client files to C:\Users\<username>\AppData\Local\HP\ALM-Client
- UFT (admin) will register OTA under HKEY_LOCAL_MACHINE
- UFT (non-admin) will register OTA under HKEY_CURRENT_USER and will unregister OTA upon exit
- UFT overwrite existing Client Launcher registration

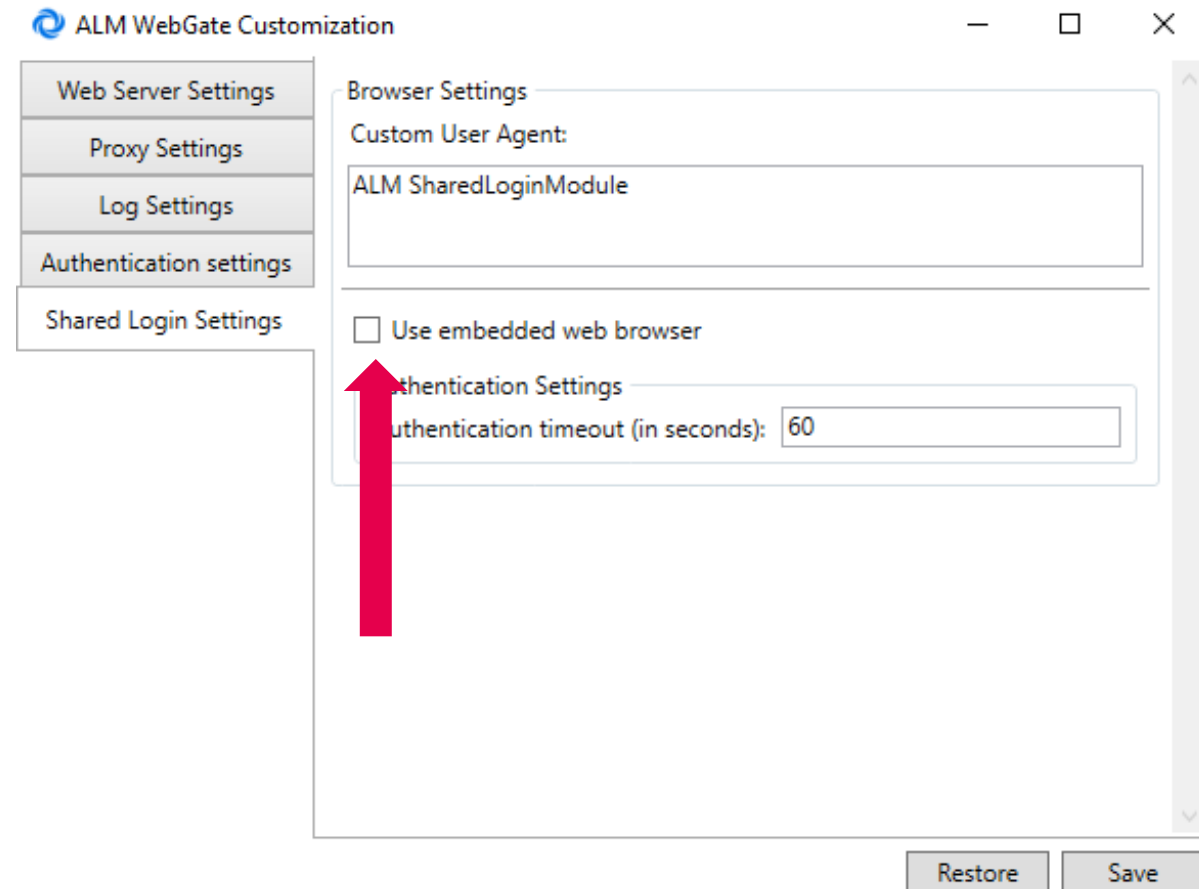

SSO Pop-up Authentication Window

By default, SSO authentication window uses the default Web Browser (IE)

For ALM 15.5.1:

- ALM Webgate Customization tool is located under `https://<sever>/qcbn/Apps`
- Use Client Launcher (embedded web browser) for authentication instead of Internet Explorer (default web browser)

Launch ALM, Site Admin, and Lab Management

Action	Details
Launch ALM	<ol style="list-style-type: none">Enter the ALM Server URL, for example, <code>http://<ALM Server>:<Port>/qcbn</code>.Click GO.
Launch ALM Site Administration	<ol style="list-style-type: none">Enter the ALM Server URL followed by <code>siteadmin</code>, for example, <code>http://<ALM Server>:<Port>/qcbn/siteadmin</code>.Click GO.
Launch Lab Management	<ol style="list-style-type: none">Enter the ALM Server URL, for example, <code>http://<ALM Server>:<Port>/qcbn/lab</code>.Click GO.

18

Limitations

1. Need browser to access SaaS Administration Add-on, API-Key Management, and Web Runner
2. SiteMinder external authentication is not supported
3. Supports only Windows

A word cloud featuring the phrase "Thank You" in numerous languages. The words are arranged in a circular pattern, with "thank you" in the center in a large, bold, blue font. Other prominent words include "gracias" (red), "mercí" (blue), "danke" (orange), "teşekkür ederim" (green), "arigatō" (green), "sukriya" (green), "obrigado" (red), "dziękuję" (green), "bedankt" (blue), "spasibo" (blue), "rahmat" (blue), "terima kasih" (blue), "sagolun" (blue), "dank je" (red), "dank" (red), "tack" (blue), "ngiyabonga" (blue), "tapadh leat" (blue), "mochchakkeram" (yellow), "go raibh maith agat" (green), "maith" (green), "agat" (green), "arigatō" (green), "tak" (red), "dakujem" (blue), "merci" (blue), "sukriya" (green), "kop khun krap" (red), "sulpáy" (blue), "gracias ago" (blue), "gràcies" (blue), "chnorakaloutioun" (blue), "sagolun" (blue), "didi madloba" (blue), "mèsi" (blue), "sobodi" (blue), "dèkuji" (blue), "najiis tuke" (blue), "kam sah hamnida" (blue), "rahmat" (blue), "xiexie" (blue), "danke" (orange), "teşekkür ederim" (green), "arigatō" (green), "sukriya" (green), "obrigado" (red), "dziękuję" (green), "bedankt" (blue), "spasibo" (blue), "rahmat" (blue), "terima kasih" (blue), "sagolun" (blue), "dank je" (red), "dank" (red), "tack" (blue), "ngiyabonga" (blue), "tapadh leat" (blue), "mochchakkeram" (yellow), "go raibh maith agat" (green), "maith" (green), "agat" (green), "arigatō" (green), "tak" (red), "dakujem" (blue), "merci" (blue), "sukriya" (green), "kop khun krap" (red), "sulpáy" (blue), "gracias ago" (blue), "gràcies" (blue), "chnorakaloutioun" (blue), "sagolun" (blue), "didi madloba" (blue), "mèsi" (blue), "sobodi" (blue), "dèkuji" (blue), "najiis tuke" (blue), "kam sah hamnida" (blue), "rahmat" (blue), "xiexie" (blue). The words are in various colors and sizes, creating a vibrant and multicultural visual.
